Current Economic Conditions

Mixed trends continued to appear in the Canadian economy in February of this year. Several of the major indicators of economic activity in February showed reductions from the same month of a year ago; however, certain series, including exports, retail trade and housing starts experienced more favourable changes between January and February of this year than they had last year. By contrast, the number of persons without jobs and seeking work continued to increase, and the number of applications for jobs with the National Employment Service also was higher in February than in January. These trends continued into March. The increase between February and March of the number in the labour force without jobs and seeking employment, however, was just equal to the increased size of the labour force; no net decline, therefore, took place in the number who had jobs. The number of persons working full-time (35 hours or more) increased by 17,000 between February and March. Fewer people worked part-time (less than 35 hours) in the week ending March 20 than in the corresponding week of February, and fewer people who had jobs were away from work. The rate of seasonal increase in full-time employment was about the same as in the corresponding part of 1953. Industrial production was slightly lower in February of this year than in February, 1953, having risen from the seasonally low January levels by almost the same relative amount in both years. Total exports were slightly higher in February of this year than in 1953, and also higher this year in the March comparison, according to preliminary data. Another important sector, higher at February 1 of this year than at the same time a year ago, was aggregate industrial payrolls. Average hourly earnings in manufacturing and mining likewise were in favourable comparison at that time.

With the level of employment somewhat lower in the early months of this year than at the same time a year ago, the maintenance of slightly higher payrolls reflected the higher average earnings compared with the corresponding part of 1953. It is of interest to examine the rates of increase in employment and earnings throughout the past few years in order to compare the contribution each has made to the substantial growth in labour income. Corresponding rates of

change can be studied in other indicators, such as personal expenditures, corporation profits, industrial production and wholesale and retail prices.

Trends in Employment and Earnings

From 1949 to the beginning of 1954 labour income rose by more than 45 per cent. Until the last few months the advance resulted both from rising employment and higher average rates of pay, but since November 1, 1953 the index of industrial employment has been slightly below the level of the corresponding part of the previous year. A very rapid rise in employment began after the outbreak of war in Korea in mid 1950, and continued through 1951. The rate of advance slackened considerably in the early part of 1952, and showed a further levelling off in 1953. The smaller rate of advance between 1952 and 1953 resulted partly from reduced employment in mining, and partly from the smaller relative increases in many of the other industrial groups. The manufacturing and trade groups together with public utility operation experienced greater relative gains in employment between 1952 and 1953 than in the preceding twelve months.

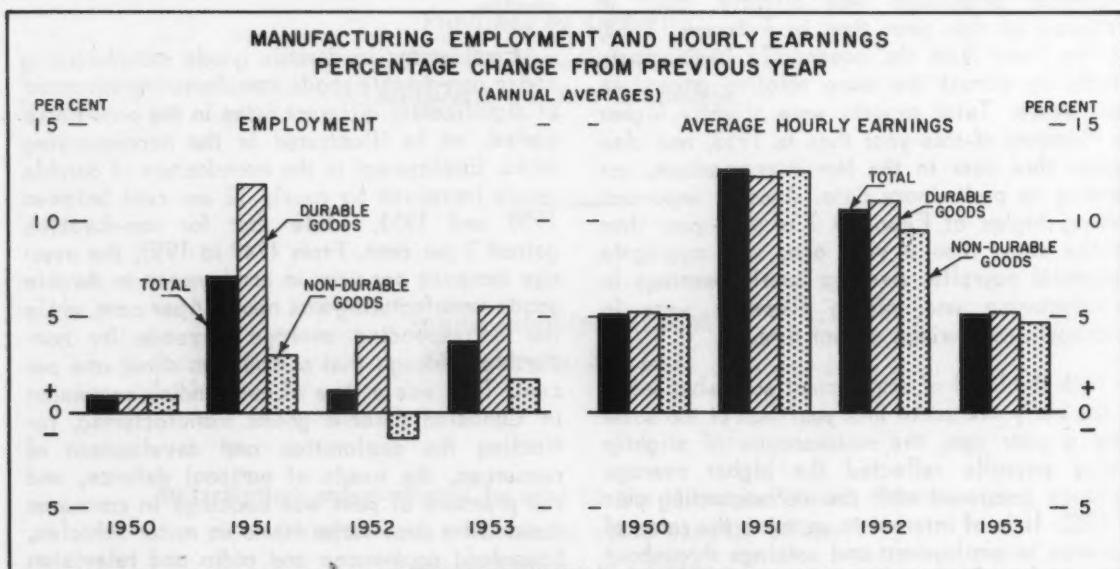

Employment in durable goods manufacturing and in non-durable goods manufacturing advanced at significantly different rates in the post-Korea period, as is illustrated in the accompanying chart. Employment in the manufacture of durable goods increased by nearly 12 per cent between 1950 and 1951, while that for non-durables gained 3 per cent. From 1949 to 1953, the average increase per year in employment in durable goods manufacturing was nearly 6 per cent, while the corresponding average increase for non-durables through that period was about one per cent. This was a time of outstanding expansion in Canadian durable goods manufacturing, reflecting the exploration and development of resources, the needs of national defence, and the pressure of post war backlog in consumer demand for such major items as motor vehicles, household appliances and radio and television sets. In the durable goods sector, employment in transportation equipment experienced the most marked gains from 1949 to 1953, with the elec-

trical apparatus and supplies industry also showing a substantial relative increase. Employment in the manufacture of chemical products showed the largest relative advance among the major non-durable components, with paper products showing a more moderate gain; employment in clothing manufacturing was at almost the same level in 1953 as it was in 1949, while the manufacture of other textile products employed fewer workers on average in 1953 than in 1949.

In the most recent comparison, that is the average level at January 1 and February 1 of this year compared with the same months of 1953, employment in durable goods manufacturing fell off by about the same relative amount as that for non-durables. Reduced employment in the agricultural implements industry was very marked, while lower employment in the manufacture of other machinery and in wood products and of primary iron and steel also contributed to the lower level of employment in that sector. These reductions were partly offset by further advances in employment for the manufacture of motor vehicles and electrical apparatus and supplies. For non-durable goods, the largest percentage reductions in employment took place in the textiles and clothing industries; these were partly offset by the continued expansion of chemical manufactures and in the paper products

industry. In the fuels sector of mining, lower employment was experienced in each successive year from 1949 to 1953 in coal mining, whereas very substantial relative gains were made by oil and natural gas.

The rates of increase in average hourly and weekly earnings varied throughout the period 1949-1953, although the increases were generally greater than in employment. Average weekly earnings rose most rapidly, over the entire period, in the forestry, construction and manufacturing industries, and for public utilities. As with employment, marked advances in average earnings took place in 1951; the annual average of hourly earnings in manufacturing for 1951 was nearly 13 per cent higher than that for 1950, as hourly rates rose on average from approximately \$1.04 to \$1.17. This rate of advance was only slightly reduced in 1952; between 1952 and 1953, however, when the relative increase in manufacturing employment was greater than in the preceding year, average hourly earnings in manufacturing advanced at about half the 1952/51 rate. Even after this reduction, however, the increase in hourly factory earnings was 5 per cent.

The durable goods sector of manufacturing has a traditionally higher level of hourly rates of pay than non-durable manufactures, as was apparent in the years just prior to 1949. Rates of earnings in the durable sector as a whole showed only slightly higher relative increases from those in the non-durable sector; this difference, however, represented a gain of 8 cents an hour more for durable goods manufacturing than for non-durables, and this increased differential in hourly rates no doubt contributed to the larger relative increase in employment in the former. This tendency toward a higher rate of advance in hourly earnings in the durable sector was reversed by early 1954; hourly earnings for that sector averaged at January 1 and February 1 only 4 per cent higher than at the same time in 1953, compared with an advance in the non-durable goods sector of 6 per cent. The textile and clothing groups, between 1949 and 1953, experienced slightly lower relative increases in hourly rates of pay and in weekly salaries and wages than most other manufacturing groups; the manufacture of mineral products, paper products and chemicals showed higher percentage increases in hourly earnings than the average for the manufacturing industries as a whole. The increases in hourly earnings in mining were about as great as those in the manufacturing industry; average earnings rose by 41 cents an hour in mining between 1949 and February 1, 1954, compared with an increase of approximately 42 cents an hour in manufacturing.

Prices and Other Indicators

The substantial increases in money wage rates between 1949 and early 1954 occurred against a changing pattern of retail prices. The rapid rise in money wage rates and weekly earnings from 1949 to 1951 took place when the prices of consumer goods also experienced a marked advance; the consumer price index, for example, rose by nearly 14 per cent through that period. As a result, average weekly wages in manufacturing expressed in constant 1949 dollars (i.e. money wages deflated by the consumer price index) increased by 3 per cent from 1949 to 1951. However, early in 1952 the consumer price index levelled off and for that year it averaged only about 2.5 per cent higher than in 1951. Weekly industrial earnings increased on average by 9 per cent in the same comparison, with the result that "real" rates of

pay and average weekly salaries and wages showed a marked gain. The more moderate increases in average earnings in 1953 took place at a time when the consumer price index was, on average, slightly below the level of 1952, adding further to the increase in "real" earnings.

Wholesale prices also advanced rapidly in the early part of the period, rising from 1949 to 1951 by more than 20 per cent. Corporation profits before taxes experienced substantial gains through this period; these appeared to reflect almost entirely the increased gross value of sales. Wholesale prices in general fell off rapidly from mid 1951 through 1952, and a moderate decline continued through 1953. Corporation profits before taxes were smaller in 1952 than in 1951, and a further moderate decline occurred in 1953.

Personal expenditure on goods and services, no doubt reflecting the expansion of real income and the rising level of employment, continued to expand throughout 1952 and 1953. These expenditures were facilitated by the relaxation of consumer credit restrictions. The amount of credit sales and of outstanding credit increased steadily until mid 1953; in the last two quarters, outstanding credit receivable continued to grow, but current sales on credit were somewhat lower than in the peak second quarter. These were replaced in total sales by the larger value of cash transactions. Industrial production showed steady rates of advance from 1949 to 1951 of about 6 or 7 per cent per year. This rate was resumed in 1953, after a smaller percentage increase in 1952.

Federal Revenues and Expenditures

Federal budgetary revenue for the current fiscal year is expected to be slightly higher than in the fiscal year ended March 31, 1954, at \$4,464 million compared with \$4,400 million in fiscal 1954. This revenue is to be realized with rates of taxation virtually unchanged; the reductions in the rates, particularly of excise taxes, are expected to reduce revenues from those available at the 1953/54 rates by only about \$36 million. These reductions were spread over a large number of commodities, including, for example, certain electrical household appli-

ances, furs, some sporting equipment, luggage, cameras and films, tires and tubes, motor cycles, soft drinks, candy and cosmetics. The general distribution of budgetary revenues arising from different sources, therefore, is ex-

pected to remain essentially the same as in the fiscal year just ended, as is outlined in the accompanying table. Disposition of this revenue by some of the principal types of expenditures also is summarized in the table.

Federal Budget Revenues and Expenditures Fiscal Year 1954-1955

⁽¹⁾For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. ⁽²⁾Monthly data are producers' shipments. ⁽³⁾Data exclude persons in certain remote parts of several provinces and Indians on reservations. Newfoundland included as of March, 1950. ⁽⁴⁾For this purpose, paid workers are taken to include all those in the civilian labour force who are without jobs and seeking work. ⁽⁵⁾Includes only those not at work and seeking work. ⁽⁶⁾Newfoundland included as of April, 1949. ⁽⁷⁾Conversions are included with annual data only. ⁽⁸⁾Prior to 1946 annual data as of June 1. From 1946 annual figures are survey averages. ⁽⁹⁾Relates to hourly earnings in one week in the month of highest employment (overtime included).

Note.—Until the end of 1952, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1952 have been revised accordingly. Monthly figures for 1953 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. ⁽²⁾Exclusive of stillbirths. ⁽³⁾Not applicable to figures on population. ⁽⁴⁾Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

Note: Newfoundland is included as of 1949.

(a) Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and no seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

(b) This item differs from column 4, top of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949.

Annual data for 1939 are as of June 1.

Note: Newfoundland is represented as of 1949.

Reported by firms customarily employing 15 persons or more. Statistics throughout Tables 9 to 11 are compiled from data which relate to the last pay period of the preceding month.

*Average weekly wages and salaries.

(1)Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. (2)Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

22 Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics. (2) Estimates based upon the number of payments in the week containing the last day of the month.

(3) Supplementary benefit payments are excluded.

(1) As at end of period. (2) Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by progress payments. (3) Inventories include manufacturers' own investment only. (4) Includes primary iron and steel, iron castings, sheet metal products and wire and wire products. (5) Includes heavy electrical machinery, office, household and store machinery and industrial machinery. (6) Excludes heavy electrical machinery.

34 Note.—The indexes are based on December 1952 = 100. For further details and complete 1952 data, see the August 1952 report.

(1) Total backlog of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. The data are reported by 950 manufacturing plants which account for approximately 30% of total value of production in 1950. (2) Orders represent a two-month sales forecast, not total outstanding orders. (3) Excluding motor vehicles. *Not applicable to "Ratio" columns. **Ratio of current month's orders to current month's shipments.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

39

(1) Monthly totals are not equivalent to annual data which include Newfoundland (since 1949) and Yukon and North West Territories for which only annual statistics are collected.

(2) Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

⁽¹⁾As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys. ⁽²⁾Excluding producers' interchange.⁽³⁾Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products. ⁽⁴⁾Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope.

Generally, the twenty-four municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-1946. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December, 1946.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of May 1953, stands at 818, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽²⁾As of January, 1950, Newfoundland is included.

⁽¹⁾Planks and boards, flooring and square timber. ⁽²⁾Includes Newfoundland as of May, 1949. ⁽³⁾Hollow blocks including fire-proofing and load-bearing tile. ⁽⁴⁾For building insulation only. ⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Since January, 1949, includes concrete chimney blocks. ⁽⁷⁾Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes advance equalization payment on barley until March, 1947, and subsidy on hogs from 1944 to date.

(2) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (3) Prior to 1941, prices were quoted on a live weight basis. (4) Prior to August, 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

⁽¹⁾Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. ⁽²⁾Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. ⁽³⁾Annual data are monthly averages of crop year.

(1) Monthly totals of 1953 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. (2) Does not include bait, offal, meal, livers, tongues or roe. (3) As of April, 1949, Newfoundland is included. (4) Data for Newfoundland are included as of January, 1954. Corresponding months of 1953 are revised to include Newfoundland as data for the current period becomes available.

⁽¹⁾ Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949.

⁽²⁾ Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

⁽³⁾ Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland.

⁽⁴⁾ Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles.

⁽⁵⁾ Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

*Assignments made under the Bankruptcy and Winding Up Acts.

(1)Quarterly data for the last five columns are monthly averages.

(2)In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Since July, 1950, agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.
